What is the password for the Windows agent

The Windows Uptime Infrastructure Monitor Agent does not have a default password. A password can be added through the Uptime Infrastructure Monitor Agent Console

1. Right click on the 'Uptime agent console' and choose "Run as Administrator".
2. Update the 'Password' field with desired password. The alphanumeric password must contain at least one alpha character.
3. Click on the 'Save' Button to save the changes. It will prompt you the following message "Uptime Agent Settings Saved! Would you like to restart the agent for the new settings to go into effect?". Click the 'Yes' button.
