

uptime.log shows error: java.sql.SQLException ORA-00018

This error indicates that the up.time Data Collector was unable to open sessions with the Oracle database, which can have a negative impact on Uptime Infrastructure Monitor performance and stability.

This problem typically occurs when the connectionPoolMaximum value in the uptime.conf file exceeds the SESSIONS parameter in the Oracle database. To resolve this issue, either reduce the connectionPoolMaximum value or increase the SESSIONS available on the Oracle database.
