Supported Browsers in Uptime Infrastructure Monitor

Uptime Infrastructure Monitor supports the latest version of the following web browsers:

- Google Chrome
- Microsoft Edge
- Microsoft Internet Explorer
- Mozilla Firefox

Note

Uptime Infrastructure Monitor requires JavaScript to be enabled, locally stored cookies and ActiveX (on Internet Explorer). Only browsers on PC platforms are officially supported.

Web Transaction Monitor is Java-based and does NOT work with modern browsers. Creating new monitors is disabled. This monitor works only if your UIM installation already has previously-captured Web Transaction monitor recordings. This does not affect previously-configured Web Transaction Monitors.
