

vCenter 5.0 Compatibility with Uptime Infrastructure Monitor

VMware has released Update 1 for vCenter 5.0 that addresses some vCenter instability issues and improves Uptime Infrastructure Monitor monitoring consistency. The official name for this release is vCenter 5.0 U1 but Uptime Infrastructure Monitor will report this version as 5.0.0 build 623373 on the vCenter's information view.

For additional details about the vCenter 5.0 U1 release, see the official release notes on the VMware website.

Monitoring vCenter 5.0 without the U1 update may produce the following symptoms:

- Uptime Infrastructure Monitor alerting about failed connection attempts to the vCenter due to issues with the supplied credentials, even though those credentials are confirmed to be valid.

```
Sample Alert
Notification type: Problem 12/Jun/2012 08:06
Host: bhdcvctrp01.bhcorp.ad (OK)
Service: vCenter Health Check Monitor
Service State: CRIT
Output: Failed connecting to virtual center with supplied credentials
URL: http://uptime
```

- The vCenter crashing.
