

SAR error and SADC problems on AIX 5.3

Issue Description

Error messages appear when running the following commands: /usr/sbin/sar, /usr/lib/sa/sadc or perfpase.sh.

Symptom

Receipt of the following error messages:

```
sar error: "System configuration changed. The current iteration values may be inaccurate."  
sar error: "There is not enough memory available now."
```

Affected Version

All Uptime Infrastructure Monitor AIX agent versions running on AIX 5.3 with SMT enabled.

Resolution

IBM has recognized and resolved this problem with the following APAR packages:

1. [IY65467](#)
2. [IY66354](#)

Please contact Uptime Customer Support for further assistance if the above vendor-provided fixes do not resolve the issue.
