

Expanding Uptime Infrastructure Monitor's Capabilities with Plugin Monitors

Plug-in monitors provide an easy way to:

- **Expand Uptime Infrastructure Monitor's standard capabilities:** add new service monitors to report on servers, services or other devices.
- **Implement special customized solutions:** plug-in monitors can provide capabilities beyond those offered by script-based custom monitors and can be fully integrated into the Uptime Infrastructure Monitor UI with defined options that will be used when creating an instance.
- **Share resources with the Uptime Infrastructure Monitor community:** all plug-in monitors released by Uptime Infrastructure Monitor or developed by Uptime Infrastructure Monitor clients are available on [the Grid](#).

Guidance for constructing your own plug-in monitor is available in the [Creating Plugin Service Monitors in Uptime Infrastructure Monitor](#) Knowledge Base article.

Popular plugin monitors tested and bundled by Uptime Infrastructure Monitor are available in the [Extension Manager](#) or for earlier version of Uptime Infrastructure Monitor on [the Grid](#).
