

WebLogic service monitor fails

Follow these steps if you encounter problems with the WebLogic service monitor:

- Confirm that IIOP is enabled properly.
- Check the weblogic logs and uptime.log file for errors that reference permissions or an anonymous user. For example:

org.omg.CORBA.NO_PERMISSION: User <anonymous> does not have permission on weblogic.management.mbeanservers to perform lookup operation

If you see this error, please review the [Monitoring JVM](#) page for guidance and instructions for disabling the anonymous user.

If these steps do not resolve your issue, please email a description of the problem and copies of the uptime.log and weblogic server log files to uptime Support.
