## How to move the Uptime Infrastructure Monitor datastore directory

Use the following steps to move your Uptime Infrastructure Monitor datastore (up.time datastore) to a different directory:

- 1. Stop the up.time Controller, up.time Data Collector, and up.time Data Store services. See Starting (or restarting) and Stopping Uptime Infrastructure Monitor for specific examples.
- 2. Move the \datastore\data folder to your desired location.
- 3. Edit the \mysq/\my.ini file by updating the following line so that it points to the new location of the datastore:

datadir="C:/Program Files/uptime software/uptime/datastore/data/"

- 4. Start the up.time Data Store, up.time Data Collector, and up.time Controller services. See Starting (or restarting) and Stopping Uptime Infrastructure Monitor for specific examples.
- 5. Confirm the change by checking the timestamps of the ibdata\* files in the new datastore directory and verify that you can successfully log in to the Uptime Infrastructure Monitor UI.
