Default MySQL Database Users and Permissions

Uptime Infrastructure Monitor is installed with the following MySQL database users:

- root (password: uptimerocks)
  The user with complete control over the database.
- uptime (password: uptime)
  A privileged user who can create, delete, flush and drop tables; create and delete indices on tables; and select, insert and delete data in tables. This user cannot perform administrative tasks such as creating other MySQL users or killing threads.

- reports (password: reports)
  An ODBC user who can select data in tables so they can generate reports using other applications. This user is not used in Uptime Infrastructure Monitor.

  For information on setting up an ODBC driver, see Connecting to the up.time DataStore via ODBC.
