

Errors when trying to delete performance data

When [trimming performance data from your MySQL DataStore](#), you may experience the following error:

```
mysql> delete from performance_psinfo where sample_id<14307634;  
ERROR 1206 (HY000): The total number of locks exceeds the lock table size
```

This error can generally be resolved with one of the following methods:

- Stop the Uptime Infrastructure Monitor core before running the queries.
- Increase the `innodb_buffer_pool_size` variable in the `/<uptime dir>/mysql/my.ini` file.
