## Errors when trying to delete performance data

When trimming performance data from your MySQL DataStore, you may experience the following error:

mysql> delete from performance\_psinfo where sample\_id<14307634; ERROR 1206 (HY000): The total number of locks exceeds the lock table size

This error can generally be resolved with one of the following methods:

- Stop the Uptime Infrastructure Monitor core before running the queries.
- Increase the innodb\_buffer\_pool\_size variable in the /<uptime dir>/mysql/my.ini file.
