

How to move the Uptime Infrastructure Monitor datastore directory

Use the following steps to move your Uptime Infrastructure Monitor datastore (up.time datastore) to a different directory:

1. Stop the up.time Controller, up.time Data Collector, and up.time Data Store services. See [Starting \(or restarting\) and Stopping Uptime Infrastructure Monitor](#) for specific examples.
2. Move the `ldatastore\data` folder to your desired location.
3. Edit the `mysql\my.ini` file by updating the following line so that it points to the new location of the datastore:

```
datadir="C:/Program Files/uptime software/uptime/datastore/data/"
```

4. Start the up.time Data Store, up.time Data Collector, and up.time Controller services. See [Starting \(or restarting\) and Stopping Uptime Infrastructure Monitor](#) for specific examples.
5. Confirm the change by checking the timestamps of the `ibdata*` files in the new datastore directory and verify that you can successfully log in to the Uptime Infrastructure Monitor UI.
