Suppress Linux agent inetd uptmagnt connection warnings

Use the following steps to reduce the number of messages recorded in var/log/messages files on Red Hat Linux agents:

```
Edit the uptimeagent or uptmagnt file under /etc/xinetd.d and add the following lines between the {} characters:
log_on_success -= PID
log_on_success -= EXIT
log_on_success -= HOST DURATION
log_on_failure -= HOST

Restart the xinetd process.
```

To test if the agent is still logging messages, run a tail -f on messages and then poll the Agent from the Uptime Infrastructure Monitor user interface to see if this action logs a new message.
