

Service Monitors

Service monitors are processes within Uptime Infrastructure Monitor that regularly check the performance and availability of services in your environment. If the monitor detects a problem, Uptime Infrastructure Monitor issues an alert.

This section gives you a breakdown of the different types of service monitors that are available in Uptime Infrastructure Monitor.

- [Agent Monitors](#)
- [Microsoft Windows Monitors](#)
- [VM Monitors](#)
- [Database Monitors](#)
- [Application Monitors](#)
- [Network Service Monitors](#)
- [Advanced Monitors](#)
