

License Reload message on UI instance

On a UI-Only Instance you may notice many log messages related to a License Reload. For example:

```
2010-08-12 10:13:03,819 DEBUG (LicenseProxyCommandExecutor:19) - Running License Reload on Monitoring Station...
2010-08-12 10:13:03,887 DEBUG (LicenseProxyCommandExecutor:66) - Monitoring Station reloaded its license.
2010-08-12 10:13:03,888 DEBUG (LicenseProxyCommandExecutor:23) - License Reload on Monitoring Station succeeded.
```

This message is a routine indication that the UI-Only Instance is validating its license with the attached data collection server. This message only appears when the logging level is set to DEBUG in the uptime.conf file. This message will not appear if the logging level is set to INFO.
