

# Custom script returns ERR

This condition is usually caused by improper *agentcmd* usage. Use the following format for guidance:

`agentcmd.exe -s -p <agent port> <agent hostname> "rexec <password in .uptmpasswd file> <unix path to script on agent host or (windows) script path in the registry>"`

For Example:

```
agentcmd.exe -s -p 9998 sql2005 "rexec password cpu"
```

Where:

sql2005 = client hostname where the custom script resides

password = password value for the agent.CmdsPassword value

cpu = the name assigned to the script path in the Windows registry (i.e. cpu = cmd.exe /c c:\scripts\typecpu.bat)
