Controller Services

The API is installed on the up.time Monitoring Station, but includes its own server that communicates with up.time DataStore. As such, the API exists as a separate process from the up.time Core process, allowing for more flexibility as the platform's feature set expands. The Controller service is named \mathtt{up} . time Controller on Windows, and $\mathtt{uptime_controller}$ on Linux.

Stopping and Restarting the Controller Service on Windows

- 1. Open the **Services** Control Panel.
- 2. Right-click the up.time Controller service, then click Stop.
- 3. Click Start to restart the service.

Stopping and Restarting the Controller Service on Linux

- 1. Log in to the Monitoring Station as root.
- Type the following command to stop the up.time Controller service: /etc/init.d/uptime_controller stop
- Type the following command to start the up.time Controller service: /etc/init.d/uptime_controller start
