Enabling and Disabling SSL/TLS on Linux/UNIX Agents

1. *If you want to **enable** SSL/TLS encryption for the Uptime Infrastructure Monitor Agent in Linux/UNIX,* run the following script:

```
/opt/uptime-agent/bin/agent-ssl.sh enable
```

*If you want to **disable** SSL/TLS encryption for the Uptime Infrastructure Monitor Agent in Linux/UNIX,* run the following script:

```
/opt/uptime-agent/bin/agent-ssl.sh disable
```

For information about manually configuring Agent SSL support in Linux, see the "Enabling SSL on the Linux Agent System" subtopic in the Knowledge Base article Using SSL Communication with Linux-Based Agent.

2. When adding Agents to the Monitoring Station, be sure to select **Use SSL** or enable corresponding option in the Global Credentials Settings page.
