

Access the Applications dashboard without logging in

The Applications dashboard is available directly via a URL reference without requiring an interactive Uptime Infrastructure Monitor login. This feature can be used to allow users with generic credentials to display critical Application status information.

To access the applications dashboard, enter a URL in the following format:

`http://<hostname>:<port>/applicationPortal.php?userid=<user>&password=<pass>`

- hostname = your Uptime Infrastructure Monitor web interface host name
- port = your Uptime Infrastructure Monitor web interface port
- user = the username to use for the login
- pass = the password for that user

Example: <http://myuptime:9999/applicationPortal.php?userid=manager&password=1234>

If the username or password contains special characters, be sure to use URL encoded character string in place of the regular character.

Example: the un-encoded password, 'pass!@#\$\$%^&*', would be entered as 'pass!%40%23%24%25%5E%26*'
