Supported Monitoring Station Platforms in Uptime Infrastructure Monitor

The Uptime Infrastructure Monitor Monitoring Station resides on a central system that acts as your enterprise gateway to all Uptime Infrastructure Monitor functionality. Authorized users can access Uptime Infrastructure Monitor by simply browsing to the Monitoring Station URL.

Officially Supported Platforms

The Uptime Infrastructure Monitor Monitoring Station is officially supported on the following platforms and operating systems. Note that this table is updated at the time of each Uptime Infrastructure Monitor product release. Official support status indicates that the platform and OS has completed full QA testing during the Uptime Infrastructure Monitor release process. Newer OS releases can often be used but please contact uptime-support@idera.com for any questions about OS versions not listed on this table.

> **Note**
>
> Uptime Infrastructure Monitor 7.1 and later versions support only 64-bit architectures. Uptime Infrastructure Monitor versions up to and including 7.0 are supported on both x86 and x86_64 architectures when used within Linux or Windows environments; however, 32-bit compatibility mode must be enabled on 64-bit Windows servers. Only Uptime Infrastructure Monitor versions up to and including 7.1 can be installed on SPARC64 or UltraSPARC hardware platforms.
